

Good Sign billing application for ServiceNow

Usage-based Billing Data Automation and Monetization integrated to ServiceNow

Good Sign billing application manages monetization of complex customer agreements offering dynamic pricing and automated billing, charging, costing, clearing and revenue recognition. With Good Sign it is straightforward to bill based on ServiceNow data independent of the industry: from MSP to Facilities Management.

Good Sign application is rule-based which makes it extremely flexible. Good Sign support virtually all pricing models: fixed fee, usage-based, packet pricing, combinations of fixed fee and variable part. Good Sign can also automatically calculate the costs and allocate them to relevant business unit, cost center or project. Good Sign can also split the invoices automatically to customer cost centers, divisions or business units based on customer's invoicing rules. Good Sign supports ecosystems and networked business models: managing chargebacks, revenue recognition rules, partner clearing rules and profitability automated and transparently.
